Smooth vertical scrolling with multiple capabilities!

THE SYSTEM

Smooth vertical scrolling with multiple capabilities! The SV-4000 K Vertical Screen by SIVAL is an insect screen system designed for easy installation, secure fitting and reliable operation. Its basic operating principle is based on an adjustable clip locking mechanism, which allows installation and removal of the screen without screwing, ensuring proper adjustment to the opening. The system features a sliding mechanism with an internal return spring, which maintains constant tension on the mesh and ensures smooth and controlled movement during operation. The system is operated via low-profile handles, designed not to protrude from the leaf and to integrate discreetly into the profile. To enhance mesh stability, the system can optionally be equipped with wind-resistant brushes, which reduce mesh oscillation and contribute to improved guidance of the leaf within the guides.

APPLICATIONS

windows | doors | residential | hospitality

+44 7426 890065 · info@sival.co.uk

Technical data per manufacturer documentation, October 2026. Performance depends on configuration and glazing.

Basic characteristics

- Vertical sliding spring for smooth rolling, with optional damper for controlled closing
- 40 mm roller cassette with a classic design profile
- Front installation option suitable for all types of window and door frames
- Fixing clips for installation on the upper part of the recess
- Fixing brackets for installation on the side jambs
- Optional quick locking system (Click-Clack)
